Environmental Action*

It's
getting easier to
be green!

At Knepper Press

We are committed to reducing the environmental impact of our business activities. In September of 2008 we purchased enough wind energy to offset 100% of our electric power needs. Over the next two years 5,040,000 kWh of wind generated electricity will enter the national electric grid in behalf of Knepper Press.

Wind energy is nonpolluting, sustainable and its use reduces our nation's need for imported fuels. The estimated benefit of our commitment is equivalent to planting 2,800 acres of trees or not driving 7,800,000 miles.

Our purchase makes a difference. As more wind energy is added to the electric grid, less forms of conventional energy are used. The result is cleaner air and a healthier environment. Now, when decreasing our reliance on fossil fuels has never been more important, U.S. wind energy potential is estimated at twice the total energy from all sources in America today. This is one resource that will never run out.

Our New World Class Printing Facility

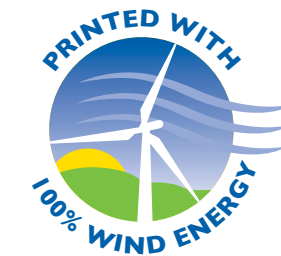

- 100,000sq ft of environmentally sensitive and energy efficient space.
- Environmentally sensitive landscaping.
- We Recycle 100% of paper, aluminum, and skids
- We primarily use vegetable based inks.
- Our new Rotoman web press uses the solvents in the ink to fuel the dryer which is 99.9% efficient.
- A high percentage of our work is on recycled paper

The wind energy logo may be used on any printed matter produced by Knepper Press. In addition a Forest Stewardship Council logo may be used on any Knepper Press publication using any of a wide selection of FSC approved papers available. Companies and institutions which use these logos on their printed communications are demonstrating their commitment to environmentally sound practices.
